

TDI Wrap Up

Well... an attempt...

Silvio Ranise
Full Professor of Computer Science,
University of Trento and
Director of the Center for Cybersecurity,
Fondazione Bruno Kessler, Trento

ranise@fbk.eu / silvio.ranise@unitn.it

User perspective

Empower users with control over their digital identity;
e.g., selective disclosure

Convince users to trust the digital identity infrastructure
e.g., usability, privacy, security

Main ingredients

Applied cryptography
hash & signatures → selective disclosure
zk proofs → privacy

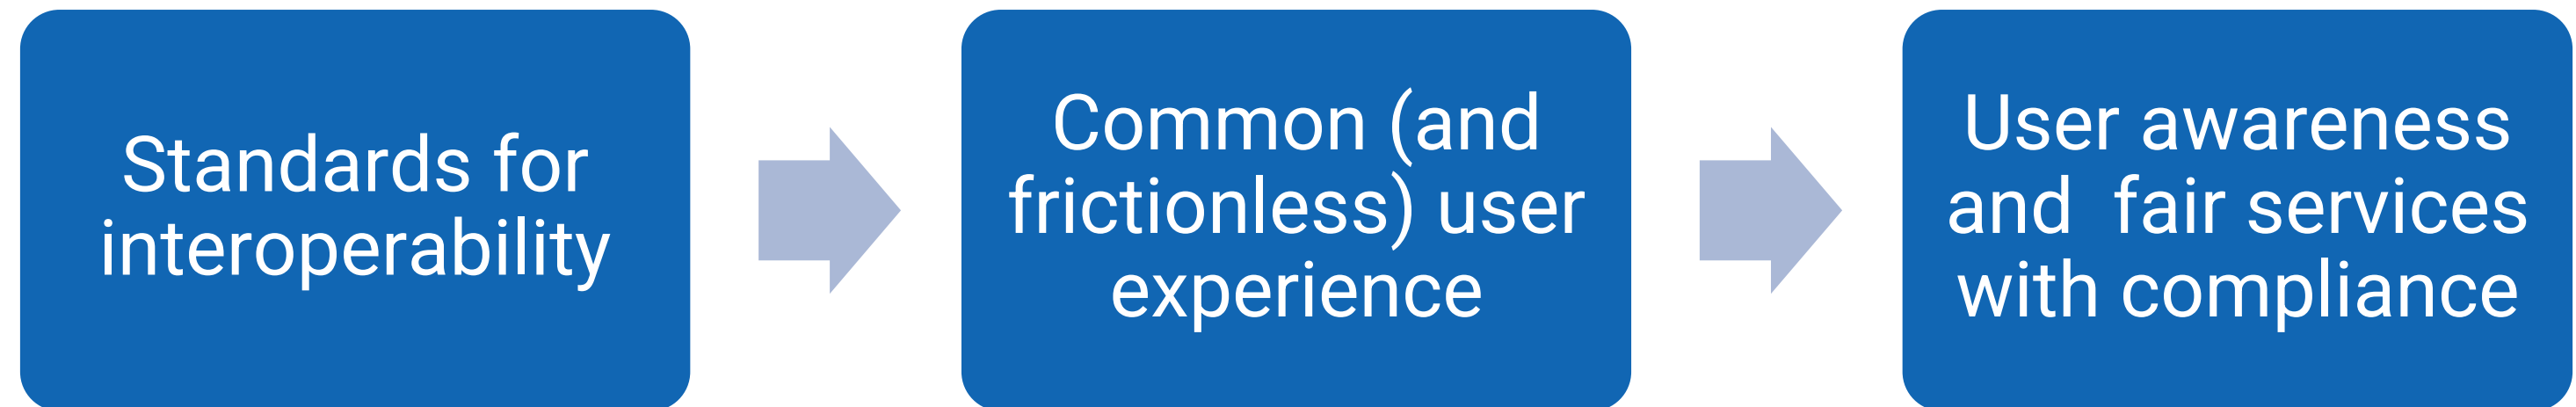

Trust model & establishment
Traditional PKI vs OID Federation
Attestation

Evolving requirements and threats
Continuous, risk based, ...
Support for negotiation of attributes

Cooking up the ingredients

- Applied cryptography
- Trust model and establishment
- Evolving requirements and threats

Cooking up the ingredients

What about the business model?

Standards for interoperability

Common (and frictionless) user experience

User awareness and fair services with compliance

- Applied cryptography
- Trust model and establishment
- Evolving requirements and threats

and don't
forget to
avoid this...
